

We're looking for a mathematically minded, ambitious and personable candidate looking to develop a career in financial modelling.

Trainee Actuary

Our core competencies are in mathematical modelling and actuarial science, complimented by a diverse blend of skills including computer programming, business consultancy, financial communications and regulation.

We are currently seeking applicants for the position of actuarial trainee to join a multi-disciplined team of actuarial professionals. You will need to be comfortable working in a small team which places emphasis on flexibility.

The key responsibilities of this role include assisting in compiling large volumes of data and utilising specialised financial projection and statistical modelling software to prepare reports.

This is a highly analytical role, requiring a great deal of data assessment and a keen understanding of probability and risk mitigation. Attention to detail is key.

We need someone very technical who can pick up new and complex ideas quickly. You should also be able to connect well with clients with good written communication skills.

The successful candidate will be educated to a minimum of A grade A Level mathematics. Computer Science A level and experience of mathematical modelling would also be an advantage. Training will be provided in all aspects of the job with full support to undertake the Institute of Actuaries exams.
